

CCEL Industrial Engineering offers a full range of Cathodic Protection Services to protect buried or immersed iron and steel structures including:

- Pipelines (land, submarine, river crossings)
- Jetties and Quay Walls
- Offshore Structures
- Refineries and Process Plant
- Onshore Terminals
- Water Treatment Plant
- Steel Piling
- Above ground water or oil storage tanks (internal components and tank bottoms)
- Buried or Mounded LPG Vessels
- Power Stations
- Heat Exchangers and Calorifiers
- Steel Reinforcing in Concrete

**The services provided include:** \_\_\_\_\_

<b>Consultancy</b>	Plant & site surveys, cost evaluations, general and detail design, preparation of specifications.
<b>System design</b>	Optimum design for projects including the use of in-house design software, CAD draughting and provision of Bills of Quantities.
<b>Supply</b>	CCEL are prime suppliers of materials for both sacrificial anode and impressed current cathodic protection systems.
<b>Installation</b>	Installation by our technicians or supervision of installation in conjunction with client/contractor's non-specific staff (and diving team if appropriate).
<b>Commissioning</b>	Pre-commissioning, commissioning and interference testing, plus report and preparation of operation and maintenance documentation.
<b>Monitoring</b>	Monitoring and maintenance of systems including reporting and recommendations for remedial action.
<b>Survey</b>	CCEL can undertake corrosion surveys including soil resistivity measurements, and redox potential, plus sample retention for full laboratory analysis.
<b>Specialist Pipeline Surveys</b>	Pearson, close interval potential survey (CIPS), stray current and interference surveys, DC voltage gradient technique (DCVG) and signal attenuation coating surveys.
<b>Turnkey</b>	CCEL can undertake projects on a complete turnkey basis; including initial survey, design, supply, installation and commissioning.
<b>Anti-fouling</b>	CCEL are the patent owners of the Anfomatic® electronic anti-fouling system and offer a complete turnkey service.
<b>MTCF® and Tank Pak</b>	Corrpro offer a Mean Time to Corrosion Failure analysis, a unique non-invasive integrity assessment designed for underground petrol storage tanks. Where appropriate we offer the Tank Pak system specifically designed for cathodic protection of USTs.

Please note that this is just a summary sheet and more detailed information on these and other services can be obtained on request.

Mixed Metal Oxide tank base Grid System-connection between anode and conductor bar

DCVG Survey on a pipeline in Eastern Europe

Monitoring an underground tank CP system

Standard Horizontal Groundbed installation utilising Silicon Iron anodes

Corrpro Tank Grid CP Systems were installed on all tank bases at Reliance, Jamnager

Tank base Cathodic Protection system installation
